

Environmental policy

Zakład Przemysłu Mięsnego Biernacki SP. z o.o. conducts its activity in keeping with the principle of creating a balance between the economy and environmental resources taking into account the needs of both present and future generations.

Conscious of the company's interference in the environment, at each stage of production we use processes that are friendly to the surrounding world. We apply innovative solutions and implement modern technologies aimed at limiting the negative impact of the company on ecosystems.

The environmental policy of ZPM Biernacki Sp. z o.o. is primarily based on:

- **Observance of requirements related to environmental protection**
- **Execution of adequate, selective waste management**
- **Optimisation of material, energy and water consumption**

We pursue our objectives by:

- Conducting our activities in accordance with current regulations and standards concerning environmental protection. Complying with laws, regulations and the company's Integrated Permission.
- Use chemicals for cleaning production equipment and premises to the minimum extent necessary, by keeping a report on their consumption.
- The use of high quality recyclable packaging. Using some of the waste materials available for further use internally. Segregation of the waste generated and handing it over to authorised collectors.
- Consumption of energy and water in a rational manner, continuous monitoring of raw material consumption.
- Improving the energy efficiency of the company, including energy recovery from equipment.
- Planning solutions involving the implementation of modern technological processes that will allow the use of renewable energy sources.
- Increasing employees' environmental conscience, which is reflected not only in the workplace but also in everyday life.

By introducing an environmental policy, the impact and scale of environmental impacts are effectively minimised, thus maintaining a balance between the company's activities and nature's resources.

The implementation of the above strategy also brings other important aspects, such as social acceptance of the company's operation, minimisation of costs or increased reputation among customers.

We are aware that by protecting nature we protect ourselves.
